## **Uncle Stacks - Whitepaper**

Version 1.0

Effective Date: June 02, 2025

Website: <https://unclestacks.fun>

### **Disclaimer**

This document is for entertainment and educational purposes only. Uncle Stacks (\$TACK\$) is a purely satirical and meme-based digital asset created for fun, cultural commentary, and community engagement. It is not an investment, security, or financial instrument. There is no expectation of profit from holding or interacting with \$TACK\$.

### **Introduction**

Uncle Stacks is the legendary, slightly unstable frog uncle of Pepe. He's large. He's loud. He may or may not fund your bad decisions - if you ask nicely.

Uncle Stacks is here to celebrate chaos, mock speculation, and honor the degenerate spirit of crypto. Born on Solana, built on vibes, and carried by copium, this meme coin doesn't promise moonshots - just stale oregano smoke and fat Stack dreams.

## Branding

Without Uncle Stacks, there'd have been no Pepe.

## Mission Statement

"To bring absolutely no utility to the blockchain, but a damn good time."

## What \$TACK\$ Is

- A meme token on Solana
- **Not** backed by anything
- **Not** a governance token
- **Not** a yield-bearing instrument
- **No utility**, just meme juice

## Tokenomics

Total Supply: 420,000,000 \$TACK\$

Category	Allocation	Vesting Details
Team	10%	12-month cliff, then monthly vesting over 12 months
Initial Marketing	5%	Fully unlocked at Token Generation Event (TGE)
Community Rewards*	15%	10% unlocked at TGE, remainder vests monthly over 12 months
Liquidity Pool	70%	Added to DEX liquidity at launch and burned permanently

\*Community rewards may include contests, memes, and other nonsense that we find funny. No financial value is implied or promised.

## Launch Details

To provide a fair and smooth launch experience, \$TACK\$ will utilize an Alpha Vault powered by Meteora or a similar DLMM-compatible vault. This allows early supporters to buy tokens directly from liquidity at launch.

### Key Notes:

- Liquidity will be deposited into the Alpha Vault at launch.
- Tokens in the vault are priced evenly for all community members.
- After launch, liquidity will be permanently burned.
- No presale, no whitelist - just good old-fashioned chaos.

## **Roadmap (lol)**

### **Q2 - Birth of the Stack**

- Meme concept stolen from the gods of degeneracy
- Mascot drawn. Chain goldified. Nacho cheese consumed.

### **Q3 - Genesis Vibes**

- Token deployed on Solana
- LP funded and locked
- Website & socials go live (or get updated)
- Listings on Solana meme coin trackers

### **Q4 - Meme Machine**

- Launch meme bounty campaigns
- Degen giveaways, sticker drops
- Partnerships with meme influencers
- Collabs with Pepe derivatives (unofficial, obviously)

### **Q1 (Next Year) - Stack Society**

- Merch? Maybe.
- More lore. More memes.
- Whatever the community dreams up - legally safe, vibe-checked.

## **Governance**

No DAO.

No voting.

Just vibes.

## **Use of Marketing Funds**

The 5% marketing allocation will fund:

- Meme bounty rewards
- Community contests
- Sticker packs and merch designs
- Bot engagement campaigns
- Legal & web upkeep (compliance is sexy)

## **Final Word**

Uncle Stacks isn't here to make you rich. He's here to make you laugh, cope, and embrace the absurdity of crypto.

So spark that oregano, crank the memes, and ape responsibly.

WAGMI (but like, ironically)
